

Reduce the Risk of Falls

At TreadNought™ we know that your fall prevention efforts are too important to depend on floor sensor mats that don't last. If you are tired of replacing expensive floor pads that don't last then our TreadNought™ Floor Sensor Pad is the perfect floor mat for you.

The TreadNought™ Floor Sensor Pad is built to last with a rugged construction that far out lasts the competition without added expense.

Our floor sensor connects easily to most nurse call systems or remote sounders and can be placed at the bedside, doorway or other locations to activate the nurse call system when a fall risk resident or patient steps onto the sensor.

Most nurse call connections available for immediate shipment for your convenience.

Optional anti-slip mesh reduces the potential for slippage on hard surface floors.
