

InfraRed Bedside Monitor

The Fall Savers® Passive Infrared Monitor uses infrared detection technology to help carers reduce the risk of falls. The monitor emits an infrared beam and triggers an alarm to alert a caregiver when movement is detected. Typically used by a bedside or mounted to a door, this is a great alternative for when carers determine that the use of sensor pads is undesirable. Battery or mains powered, the Fall Savers® Infrared Monitor is versatile, simple to set up and easy to use.

Model 91170 - Shown with Optional Extension Mounting Bracket (0121-125)

Local or Remote alarm options allow for the alarm to sound locally on the monitor or remotely through an existing nurse call system or portable pager (nurse call cable and pager optional). The Fall Savers® Infrared Monitor is supplied with a swivel bracket for easy mounting and adjustable positioning, an optional C-clamp extension bracket is available for mounting to a bed frame.

This monitor comes with a one year limited warranty and has been used successfully in thousands of care homes as an aid to help caregivers improve safety and reduce fall risk.

Features include:

- Battery or mains powered
- Beep or chime alarm tones
- Compatible with most nurse call systems (optional cable required)
- Low Battery Indicator
- Easy mount swivel bracket

Optional Extras:

- Metal C-clamp extension bracket
- Mains power supply
- Portable Pager

Nurse call accessories allow for easy connection to most nurse call systems
